

We have been engaged by the Management of this building to carry out a routine pest control service of the premises occupied by you. This service is being performed to eliminate or prevent **BEDBUG** infestations.

Preparation of your unit applies to the adjoining wall to the unit of concern. Your building manager will let you know which wall it applies to. The technician will also inspect all areas conducive to bedbugs in the unit. Please follow these directions;

- Move all furniture 2 feet away from the wall. This applies to only the wall that adjoins the infected unit.
- Remove all electrical plates from wall that adjoins the infested unit. We treat inside the wall.
- Move all items away from heat pipe chase if applicable.
- If your kitchen adjoins the infested unit, remove all kitchen cutlery and utensils from cabinets.
- Monitors may be placed in high traffic areas for insects. Please do not move or throw away.
- You will need to be out of your unit for 4 hours if healthy, 24 hours if you are pregnant, a child under 2 years of age, or if you have respiratory issues, heart conditions or allergies.

Any questions, please contact the building manager.

Thank you for your cooperation in this matter. We are hoping to have this problem solved as quick as possible.
