

Keys to a Successful Aprehend Treatment.

Your home was professionally treated with Aprehend. For success, here's your part:

- Wait to re-enter. This allows the aerosol droplets to settle and for the Aprehend barriers to dry.
- For re-entry time a door hanger providing you with the time you may re-enter will be left. Please ensure that you return only after the listed time so that you and your pets can **safely** re-enter the premises.
- Regularly launder all bedding. Wash all sheets and pillowcases and dry at high heat for 30-40 minutes. Run comforters and pillows through dryer at high heat for 30-40 minutes. Launder regularly until your pest professional indicates otherwise.
- Maintain normal sleeping routines and locations. Otherwise, bugs will remain dormant in your absence and not cross an Aprehend barrier.
- Expect wandering behavior. Prior to death, bugs emerge at odd times of the day and in plain view.
- **DO NOT** expose Aprehend to liquids. This will render Aprehend completely ineffective.
- **DO NOT** apply chemicals on the same surface as Aprehend. This includes both cleaners and over-the-counter pesticides.
- Be patient. You'll see significant knockdown in 4-7 days, but they may emerge from different life cycle stages after that. Don't be alarmed: the Aprehend barriers will keep working for up to 3 months.

To enjoy Aprehend's full effect and up-to 3-month residual protection, you must follow these guidelines. If you have questions or concerns, **contact your trusted Assassin Pest Professional.**
